VODKA

RAZMOVA

The product range of vodka is made on the basis of ethyl rectified alcohol “Alpha”. In the production of vodka the artesian water from our own sources is used. The sources are situated on the territory of the distillery. The water is treated in 6 steps of filtration, including by active carbon, impregnated with silver, silicon, active carbon of BAY-A, carbon on the basis of natural shungite. In order to give soft and authentic taste, the raisin infusion, the aromatic spirit of rue breadcrumbs and honey are the components of this vodka.

Volume: 0.5 L
Alc/vol.: 40 %

VODKA

STROGANOFF

MEDICAL-TABLE MINERAL WATER

AKVADIV

PREMIUM MINERAL WATER

The water is extracted from artesian well about 353-366 meters deep and is poured in ecologically clean glass bottles of nominal volume 0.5 L, 0.75 L.

The water does not undergo any treatment, except deferrization by air procession and multistep filtration. In the process chemical balance of the product remains the same. This makes the water taste pleasant , and the conditions of extraction and bottling guarantee the original microbiological purity

Natural mineral water "AKVADIV" annually proves its quality, winning awards at national competitions and tastings

Volume: 0.5 L, 0.75 L
